

Emergency **POWER SYSTEMS** Management

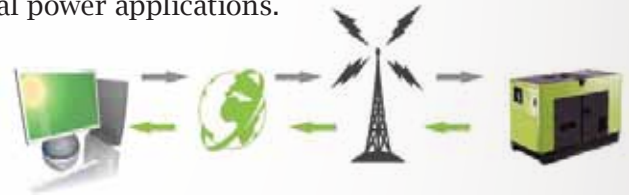

Wireless Generator Monitoring System

PM Technologies has partnered with a national wireless provider to offer a cost effective, user friendly solution for remote generator monitoring. This solution provides real-time monitoring of your generator set 24 hours a day, 365 days a year so that you do not have to. We monitor and provide critical generator engine data to you and our service staff within moments of an alarm or failure. This insures increased generator availability and a rapid response to service problems. Our wireless monitoring system is compatible with any make or model of generator and requires no integration with your building's IT infrastructure.

PM Technologies Wireless Generator Monitoring System is designed specifically for emergency power systems. It monitors engine operations and detects pre-alarms or failures. When combined with one of *PM Technologies* custom designed maintenance programs, you are protecting your critical assets with the most complete **PREVENTIVE** service program in the industry.

It is like having a technician on site 24 hours a day

By instantly sending generator failure messages to you and our on-call service staff, a technician can be dispatched and the issue resolved before it becomes a real problem. The PM Technologies Wireless Generator Monitoring System can be used in standby, prime and rental power applications.

Benefits

- **Mission Critical Engine Data - System-wide Statistics**
- **Reduced Risk of Generator Failure - Assured Availability**
- **Predictive Repairs - Trending of Critical Engine Data**
- **No Infrastructure Investment - Emergency Repair**
- **No billing surprises - 3rd Party Documentation**
- **Scheduled PMs and Fuel Delivery - Remote Diagnostics Tool**
- **Asset Management Program - First Trip Success Rate**
- **Direct link to PM Technologies Power Service - Asset Location via GPS**
